**Subject:** Dimock - Tox Review of Round 2 Sampling Results

Hi Dawn -

Its been awhile since we last "talked".

I wanted to give you a quick update. In May we re-sampled the 4 locations where EPA is providing water. These "Round 2" homes (HW-4, 6, 7 and 8a) were sampled for metals only. We also sampled 3 new locations that we not sampled as part of the initial sampling - these locations were analyzed for all the same parameters with the exception of Isotech (Supplemental Round 1).

Management has requested that we expedite our review of the Round 2 results. The Round 2 data has been lab-validated by R3 labs and is currently being reviewed to determine what, if any, final qualifiers are required. Once this project level review is complete, the final qualifiers will be entered into SCRIBE and individual tox reports will be generated for each of the four locations.

We are hoping to have tox reports for the 4 locations to you for your review either tomorrow or by Wed 6/13. Please note that we will also be sending the results to the HQs EU for their concurrent review. As with the initial sampling, we are asking that you review the data and prepare a memo with your findings. Management has asked that the tox review be completed by next Mon 6/18. Obviously, this assumes that we get you the results in enough time for you to complete your review.

I am not certain what your schedule is like this week, but wanted to give you a little heads-up. Hopefully we will have the results to you no later than Wed 6/13.

Please let me know if you have any questions and/or if you are not available to review the data this week.

Thanks- Kelley
